

Syllabus

for course at advanced level

Statistical Physics

Statistisk fysik

7.5 Higher Education

Credits

7.5 ECTS credits

Course code:	FK7058
Valid from:	Autumn 2017
Date of approval:	2017-01-16
Department	Department of Physics
Main field:	Physics
Specialisation:	A1N - Second cycle, has only first-cycle course/s as entry requirements

Decision

This course plan has been established by the Board of Science at Stockholm University on 2017-01-16.

Prerequisites and special admittance requirements

Admission to the course requires knowledge equivalent to passed courses (excluding introductory courses) of 45 credits in mathematics and 60 credits in physics, where the courses Quantum mechanics, 7.5 credits (FK5020), Atomic and Molecular Physics, 7.5 credits (FK5023) and Statistical Mechanics and Condensed Matter, 7.5 credits (FK5025) should be included. Additionally, admission to the course requires knowledge equivalent to upper secondary school English B/English 6.

Course structure

Examination code	Name	Higher Education Credits
HELA	Statistical Physics	7.5

Course content

This course describes the thermal properties of several systems in equilibrium. The models and their relevance for physical system that are treated include: the Ising, XY and Heisenberg models. Basic principles such as magnetism, superfluidity, first and second order phase transitions, symmetry breaking, order parameter, scaling and universality classes. Treatment of models in terms of Landau's mean field theory and its limitations, and Kosterlitz Thouless phase transitions.

Learning outcomes

After having passed the course the student is expected to be able to:

- describe physical systems in terms of simple models
- describe and apply mean field theories in the description of simple models and phase transitions
- apply principles such as scaling, symmetry breaking and order parameter in the description of phase transitions

Education

Instruction consists of lectures and exercises.

The course will be given in English if requested by any student enrolled.

Forms of examination

a. The course is examined as follows: knowledge assessment takes the form of written and oral exam. If the instruction is in English, the examination may also be conducted in English.

b. Grades will be set according to a seven-point scale related to the learning objectives of the course:

A = Excellent

B = Very good

C = Good

D = Satisfactory

E = Adequate

Fx = Fail, some additional work required

F = Fail, much additional work required

c. The grading criteria will be distributed at the beginning of the course.

d. In order to pass the course, a minimum grade of E is required.

e. Students who receive a failing grade on a regular examination are allowed to retake the examination as long as the course is still provided. The number of examination opportunities is not limited. Other mandatory course elements are equated with examinations. A student who has received a passing grade on an examination may not retake the examination to attain a higher grade. A student who has failed the same examination twice is entitled to have another examiner appointed, unless there are special reasons to the contrary. Such requests should be made to the department board.

The course includes at least two examination opportunities per year when the course is given. At least one examination opportunity will be offered during a year when the course is not given.

f. Students awarded the grade Fx are given the opportunity to improve their grade to E. The examiner decides the supplementary assignments to be performed and the pass mark criteria. The supplementary assignments will take place before the next examination session.

Interim

Students may request that the examination be conducted in accordance with this course plan even after it has ceased to be valid. However, this may not take place more than three times over a two year period after course instruction has ended. Requests must be made to the departmental board. The provision also applies in the case of revisions to the course plan (and the revisions of the course literature).

Limitations

The course may not be included in examinations in combination with course Statistical Physics II (FK7016) or equivalent.

Misc

The course can be included as part of the master's programs offered at the Physics department, but is also offered as a separate course.

Required reading

The course literature is decided by the department board and published on the Department of Physics's website at least two months before the start of the course.
