

Syllabus

for course at advanced level

Advanced Complex Analysis

Avancerad komplex analys

7.5 Higher Education

Credits

7.5 ECTS credits

Course code:	MM7026
Valid from:	Autumn 2021
Date of approval:	2019-09-30
Changed:	2021-04-29
Department	Department of Mathematics (incl. Math. Statistics)
Main field:	Mathematics/Applied Mathematics
Specialisation:	A1F - Second cycle, has second-cycle course/s as entry requirements

Decision

This syllabus was approved by the Board of the Faculty of Science at Stockholm University on 2019-09-30 and revised on 2021-04-29.

Prerequisites and special admittance requirements

Admission to the course requires knowledge equivalent to the courses

- Mathematics III Foundations of Analysis 7.5 credits (MM5021); - Mathematics III - Complex analysis 7.5 credits (MM5022);
- English B/English 6 or equivalent.

Course structure

Examination code	Name	Higher Education Credits
HELA	Advanced Complex Analysis	7.5

Course content

The course covers: Generalisations of Cauchy's integral formula, analytic continuation, normal families and the Riemann mapping theorem, special classes of conform maps, complex differential equations, and by the teacher for each course instance chosen applications, where the applications can be chosen among:

- Hardy spaces
- Boundary behavior of analytic functions
- Riemann-Hilbert problems
- Harmonic functions and harmonic measure
- Infinite products of analytic functions

Learning outcomes

After the course, students are expected to be able to

- formulate and prove theorems on analytic functions, for instance Cauchy's generalised integral formula and the Riemann mapping theorem,
- use and analyse conformal maps,
- account for the theory of analytic continuation and for properties of solutions to complex differential equations,

- use the above mentioned skills in selected applications.

Education

Instruction consists of lectures.

Forms of examination

a. The course is examined as follows: Knowledge assessment takes the form of written exam.

b. Grades are assigned according to a seven-point goal-related grading scale:

A = Excellent

B = Very Good

C = Good

D = Satisfactory

E = Sufficient

Fx = Fail (more work required before credit can be awarded)

F = Total fail

c. The grading criteria will be distributed at the beginning of the course.

d. To be awarded a pass, a minimum of grade E is required.

e. Students who receive a failing grade on a regular examination are allowed to retake the examination as long as the course is still provided. The number of examination opportunities is not limited. Other mandatory course elements are equated with examinations. A student who has received a passing grade on an examination may not retake the examination to attain a higher grade. A student who has failed the same examination twice is entitled to have another examiner appointed, unless there are special reasons to the contrary. Such requests should be made to the department board. Under normal circumstances, the course includes at least three examination opportunities per academic year the course is offered. For the academic years that the course is not offered, at least one examination opportunity is offered.

f. There is no possibility to improve the grade Fx to a pass grade in this course.

Interim

Students may request that the examination be conducted in accordance with this course plan even after it has ceased to be valid. However, this may not take place more than three times over a two year period after course instruction has ended. Requests must be made to the departmental board. The provision also applies in the case of revisions to the course plan.

Misc

This course is offered as part of the Master's Programme in Mathematics and as a separate course.

Required reading

The required reading is decided by the departmental board and published on the Department of Mathematics' website at least 2 months before the start of the course.
